CAREER OBJECTIVE

- Seeking a Software Developer role where I can apply my skills in full-stack development and AI-powered applications while contributing to innovative, scalable solutions and continuously enhancing my technical expertise.

EDUCATION

Buddha Institute of Technology B.Tech – Computer Science and Engineering	Gorakhpur, India Oct 2023 – 2027
--	-------------------------------------

SKILLS SUMMARY

- **Language:** JavaScript, Python
- **Frontend:** React.js, HTML, CSS
- **Backend:** Node.js, Express.js
- **Database:** MongoDB, Pinecone (Vector Database)
- **AI / Generative AI:** Large Language Models (LLMs), RAG (Retrieval-Augmented Generation), LangChain, Google Gemini API, Embeddings
- **Tools:** Git, GitHub, Postman, VS Code, Vercel, Render, MongoDB Atlas
- **Other:** REST APIs, Socket.io
- **Core:** OOPs, DBMS, OS, DSA

EXPERIENCE

CodewebX Remote	India
<i>FullStack Intern</i>	Mar 2026 – May 2026
◦ Worked on a collaborative MERN stack project, focusing on Front-end development and API integration. ◦ Designed responsive and interactive user interfaces with React.js, Tailwind CSS, and Framer Motion to enhance user experience.	
Codec Technologies <i>MERN Stack Intern</i>	Remote Feb 2026 – March 2026
◦ Built full-stack MERN applications integrating MongoDB, Express.js, React.js, and Node.js ◦ Implemented secure user authentication and authorization mechanisms	

PROJECTS

- **EchoMind**
Technologies: React.js, Node.js, Express.js, MongoDB, LangChain, Google Gemini API, Pinecone, RAG, JWT
[GitHub](#)
 - Developed a full-stack AI-powered conversational assistant using the MERN stack, integrating Large Language Models (LLMs) to generate context-aware responses.
 - Implemented Retrieval-Augmented Generation (RAG) with LangChain, vector embeddings, and Pinecone to enable semantic search and improve response accuracy.
 - Built a responsive chat interface with secure JWT authentication and seamless frontend-backend integration using REST APIs.
- **AI Habit Tracker**
Technologies: React.js, Express.js, Node.js, Mongoddb, Mongoose, Socket.io, Google Gemini API, JWT, Tailwind CSS
[GitHub](#)
[Live](#)
 - Designed a habit management platform that enables users to create, track, and maintain daily habits through an intuitive interface.
 - Enhanced user engagement with AI-generated habit suggestions and personalized productivity insights using Google Gemini API.
